Location: India

PROFESSIONAL SUMMARY

Computer Science Engineering graduate (2025) and Full-Stack Developer focused on **system design, adaptive logic, and intelligent decision-making**. Experienced in building production-ready web applications and AI-driven systems involving **intent inference, probabilistic modeling, and explainable system behavior**. Strong in React, TypeScript, Node.js, Python, and AI API integrations.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3

Frontend: React.js, Vite, Tailwind CSS

Backend: Node.js, Express.js, Flask, FastAPI

System & AI: Intent-Driven Architectures, Semantic Embeddings, Gemini API, OCR (Tesseract)

Authentication: JWT Authentication, Role-Based Access Control

Databases: MongoDB, PostgreSQL, SQLite, Supabase

Deployment & Tools: Render, Vercel, Git, GitHub, VS Code, Postman

EXPERIENCE

Full-Stack Developer – Essence (Client Project)

2025

Natural Products E-Commerce Platform (Remote)

- Built and deployed a production-ready e-commerce platform for a real client
- Developed React frontend and Node.js/Express backend with secure JWT authentication
- Designed an admin dashboard managing **50+ products** and full order lifecycle
- Integrated MongoDB Atlas and deployed via Render (backend) and Vercel (frontend)
- Prepared Razorpay payment integration for production rollout

PROJECTS

IntentOS – Adaptive Intent-Driven System

[GitHub](#)

- Designed an explainable intent inference architecture from user interaction signals
- Built a policy-based adaptation layer with feedback-driven reinforcement and temporal decay

Capstone: Echoform – Cognitive Identity Modeling System

[GitHub](#)

- Modeled evolving user identity using embeddings, uncertainty estimation, and temporal decay
- Implemented belief update pipelines and active clarification for ambiguous inference states

SyncVerse AI – AI-Powered Knowledge Platform

[Live](#) — [GitHub](#)

- Built a **RAG-style system** to query multiple PDFs and YouTube transcripts using Gemini API
- Implemented document chunking, semantic retrieval, and contextual response generation
- Added OCR fallback with Tesseract for scanned documents

Blood Bank Management System (MERN Stack)

[GitHub](#)

- Developed a full-stack platform with JWT authentication and real-time blood inventory tracking

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science Engineering

2021 – 2025

KMCT College of Engineering
